OBJETIVO/ALCANCE

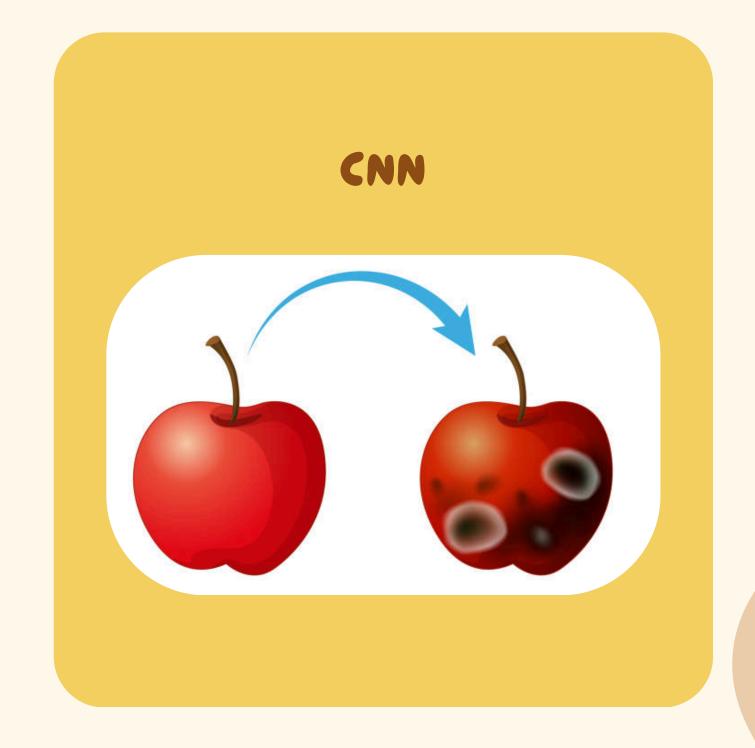

OBJETIVO/ALCANCE

Modelo CNN que clasifique correctamente el estado de las frutas mediante imágenes.

- Tipo de fruta
- Buen o Mal estado

DATASET

DATASET A UTILIZAR

ANTES

- 14 TiPoS DE FRUTAS (TOTAL: 28)
- 29.000 IMAGENES
- 5 GB

DESPUÉS

- 5 TiPoS DE FRUTAS (TOTAL: 10)
- 5.700 **IMAGENES**
- 2,00 GB

'Fruit and Vegetable Disease (Healthy vs Rotten)'

METODOLOGIAS Y MODELOS

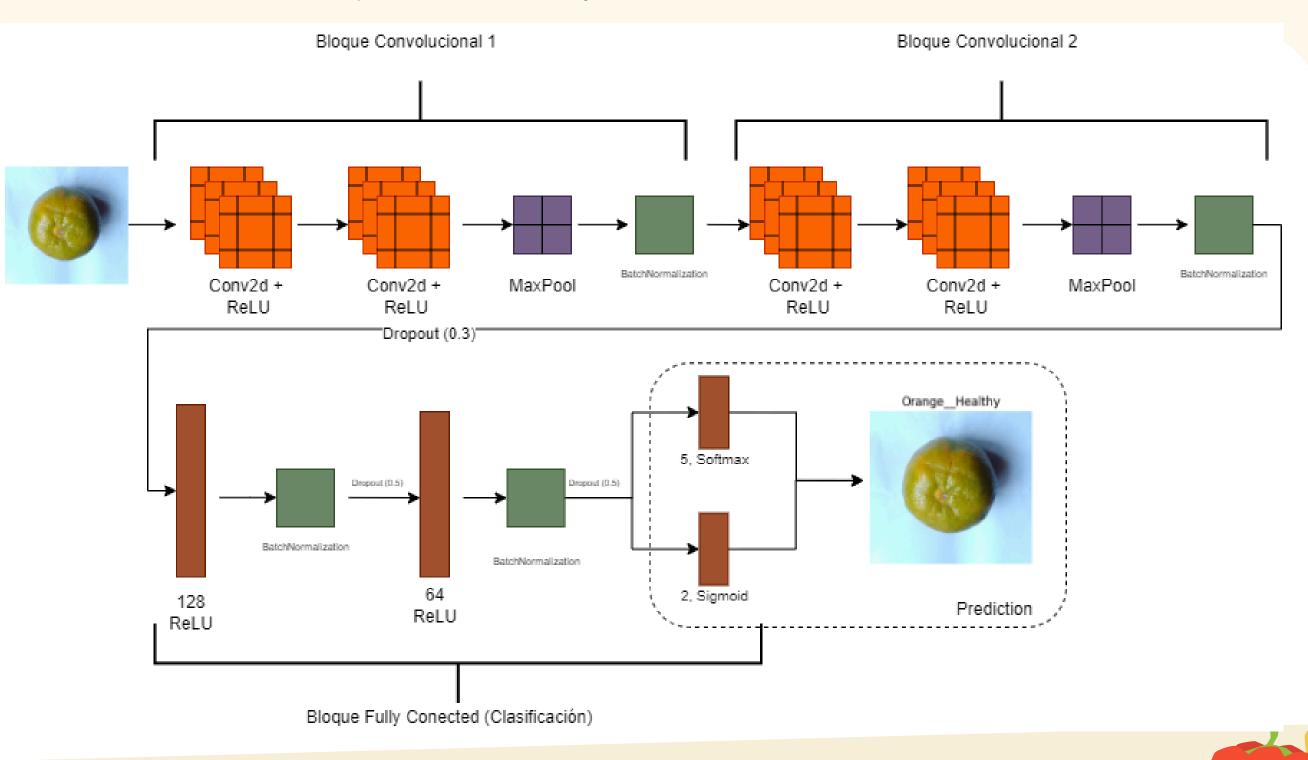

• 2 BLOQUES
CONVOLUCIONALES

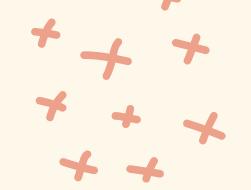

DNN:

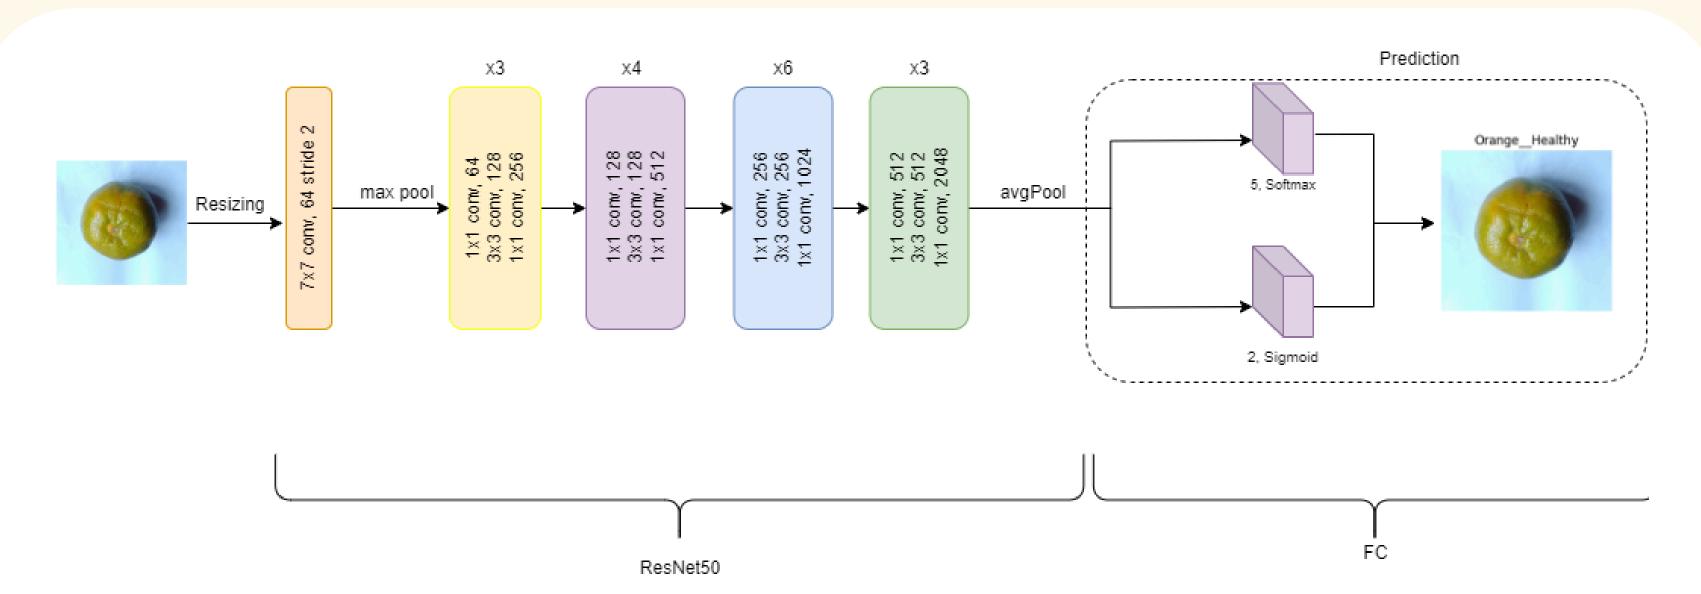

- DOS CAPAS OCULTAS (128, 64)
- DROPOUT Y BATCH NORM.

2. RESNET50

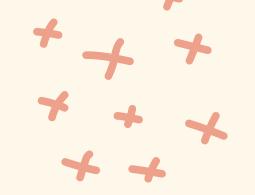

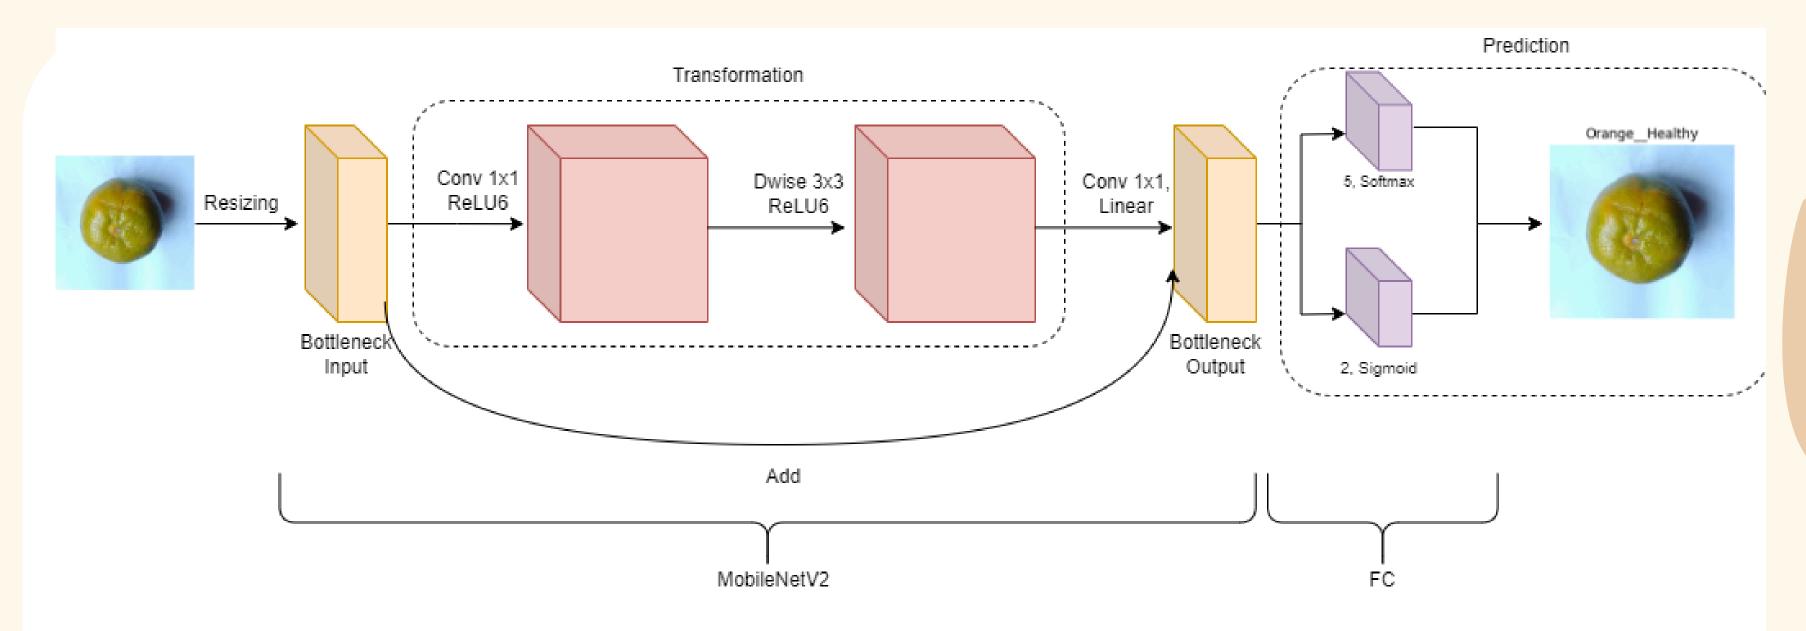

- BLOQUES RESIDUALES
- ENTRADA: 7X7 MAXPOOLING

3. MOBILENET

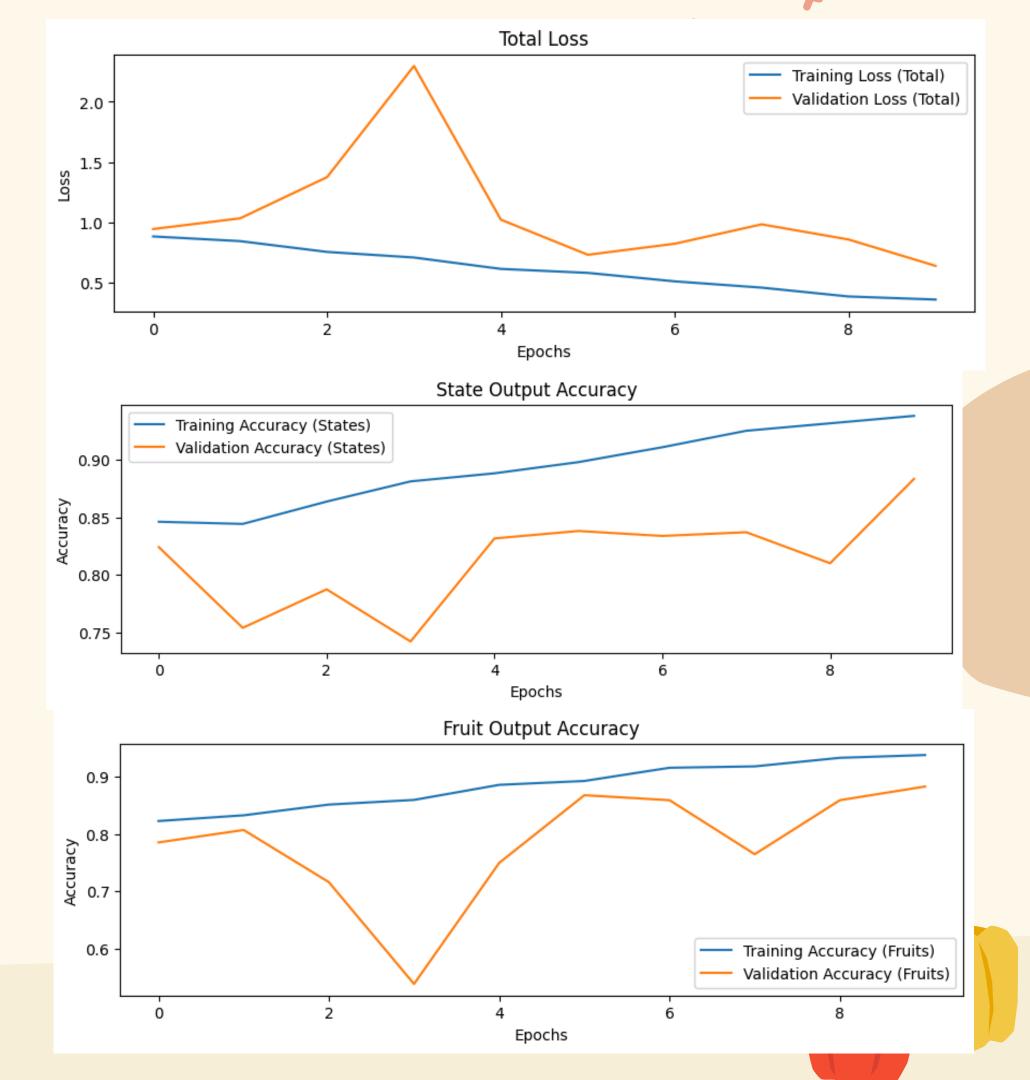

- BLOQUES BOTTLENECK
- TRANSFORMACIONES LIGERAS

ACCURACY

- FRUIT - STATE

TIEMPO ENTREN.

1. Modelo desde Cero:

- 431 seg
- Loss: 1.22
- Fruit Accuracy: 77.47 %
- State Accuracy: 73.73 %

2. Modelo ResNet50:

- 135 seg
- Loss: 0.2525
- Fruit Accuracy: 96.91 %
- State Accuracy: 95.25 %

3. Modelo MobileNetV2:

- 52 seg
- Loss: 0.8809
- Fruit Accuracy: 79.28 %
- State Accuracy: 83.59 %

CONCLUSIONES

CONCLUSIONES

1. Eficiencia del Modelo (MobileNetV2):

- 52 seg.
- Arquitectura ligera y optimizada para móviles.
- Precisión moderada (79.28 % frutas y 83.59 % estado)

2. Precisión y Robustez (ResNet50):

- Más preciso (96.91 % frutas, 95.25 % estado)
- Capacidad para aprender caract, profundas con bloques resid.
- 135 seg.

3. Limitaciones del Modelo desde Cero:

- Menor precisión (77.47 % frutas y 73.73 % estado)
- Mayor tiempo de entrenamiento (431 seg).
- Carece de optimizaciones y aprendizajes previos.

4. Elección del Modelo:

- Escenarios con precisión prioritaria, ResNet50
- Tiempo y recursos limitados, MobileNetV2.

MUCHAS GRACIAS
